EDUCATION

University of Illinois Urbana-Champaign

May 2025

Bachelor of Science in Computer Science, Minor in Statistics

GPA: 3.82/4.0

- Relevant Coursework: Distributed Systems, Algorithms, Software Engineering, Communication Networks

TECHNICAL SKILLS

Languages: Go, JavaScript/TypeScript, Java, C++, Python, SQL (MySQL, Postgres), HTML/CSS

Frameworks: Next.js, Spring, PyTorch, React, Node.js

Developer Tools: Git, CI/CD, Docker, AWS, Google Cloud Platform, Unix, Kubernetes

Databases: Postgres, Redis, Neo4J, MongoDB, MySQL

EXPERIENCE

Software Engineer

Aug. 2025

Meta

C++ | Distributed Systems

Software Engineer Intern

Jun. 2024 – Aug. 2024

Wizards of the Coast

Go | Kubernetes | Kafka

- Reduced manual testing time by 80% and enabled continuous delivery by building a test client using C# with automated pipelines to test transaction services integration.
- Improved service reliability and maintainability by writing code and unit tests for microservices using Go.

Software Engineer

Aug. 2022 - Dec. 2023

MIDL

TypeScript | AWS | Next.js | React | Go

- Secured high-profile clients in need of large-scale surveillance solutions for a fast-growing startup by developing full stack mission-critical software using TypeScript with Next.js.
- Reduced query times by up to 89% on high traffic API endpoints by writing and optimizing high-speed REST APIs with complex computation, and storing data in MongoDB and Postgres databases.
- Secured important contracts by building and optimizing a real-world map feature, accurately and reliably providing real-time streamed data, enhancing the user experience.
- Successfully delivered intricate features under tight deadlines, constructing dynamic and responsive interfaces using React to handle real-time data via WebSockets, webhooks, and HTTPS requests.

Summer Mentee

Jun. 2022 - Aug. 2022

Microsoft

- Collaborated with senior product managers for HoloLens to develop prototype in the HoloLens line alongside a low-code app builder for PowerApps line that won “Greatest Impact on Life in the Future” at Microsoft hackathon.

PROJECTS

AnkiAlgo

Go, TypeScript, Next.js

- Provide optimized technical interview preparation framework by using spaced repetition and targeting weak areas.
- Adapt to user understanding by analyzing performance across like questions using text vector embeddings.

Rembrandt

Python, FastAPI, JavaScript, React, AWS

- Website for generating stock images using a brand's theming across several images using DALL-E and GPT Vision
- Deployed scalable and low-cost backend using AWS Lambda Functions and static frontend

LEADERSHIP

Software Engineering Club

- Led 5 teams totaling 23 people developing a full stack mobile app for clubs built using React Native and Node.js
- Developed features, fixed bugs, conducted code reviews, and implemented industry practices to mentor students
- Managed deployment and led closed beta with university clubs, totaling 3000+ users

Association for Computing Machinery

- Provided comprehensive mentorship to incoming freshman, focusing on long-term skill development, project guidance, and personalized technical growth.
